234	Iodine Salt Testing Kit	The salt testing kit should be ready to use in liquid form. Each salt testing kit should have 20 ml. testing solution or capacity of 75-100 samples. The packing should be in a plastic screwed cap vial and able to dispense one drop at the time for use at community level. It can be stored at ambient temperature and relative humidity (20 – 90% ± 10%).Testing Parameters:- The kit should be able to differentiate: a. Salt with nil iodine b. Salt with inadequate iodine in the range of 05 to less than 15 PPMc. Salt with adequate levels of iodine 15 PPM or above. The kits should be able to detect iodine levels in the salty from various sources and characteristics e.g. salts that are alkaline / acidic in nature and with varying sodium chloride content in the country.Test Report The kits should have been evaluated and validated by at least one international agencies like WHO, UNICEF and / or National level laboratories. The detail test report of all the test parameters must be furnished in the technical bid.	20 ML
